

Havant Thicket Winter Storage Reservoir

5 - Landscape, Conservation and Recreation

Activity Scenarios

The three activity scenarios presented in this section are intended to provide some idea of the different scale of landscape and ecological provision possible, together with different intensity of visitor facilities.

Activity Scenario	Aims	Visitors	Parking
Low	Local use, quiet environment, wildlife, informal recreation (walking, cycling, riding)	5,000 - 20,000	Current parking
Medium	As for low but with additional facilities for play, visitor/education centre, angling, bird watching	20,000 - 100,000	100 - 200 additional spaces
High	Facilities for wider area: water sports, larger visitor/ education centre, opportunity for events and research facility	100,000 - 300,000	400 - 600 additional spaces plus improved public transport

These activity scenarios are intended to provide a starting point for discussion at the exhibition and workshop, and in the feedback forms that are returned to us. The illustrations show parts of the site (based on 3D images). The first is of the wetland area as it could appear in the low and medium activity scenarios; the second shows the northern shore with the beach as it could appear in the high activity scenario.
