

Havant Thicket Winter Storage Reservoir

5 - Landscape, Conservation and Recreation

Medium Activity Scenario

The aim of the medium activity scenario is to provide improved access to the site for walking, cycling and horse riding, with the emphasis on providing a quiet environment, while also providing some additional play, education and improved facilities for angling and bird watching.

- A visitor/education centre is shown located on the northern bank of the reservoir where it would have excellent views across the reservoir.
- A play area for young children could be provided next to the visitor/education centre, where adults would easily be able to supervise.
- A wind turbine providing power for the visitor/education centre.
- Car parking is shown located in the forest to the north of the reservoir, utilising land that has already been cleared or lies outside the woodland, close to the access road from the B2149 and the proposed location for the visitor/education centre.
- Tree planting would be undertaken as part of the landscaping of a new car parking area.
